AI

**Casio 14-A  
(1950s)**

2015

... technology never made up for a lack of good teachers or good principals ... If history is a guide, new technologies will be absorbed by schools but will do little in the end to advance education.

... **confirm that the technology alone cannot impact learning.**

2020

Technologies often assume that their creations can reconfigure or by pass these complex system, but instead they discover that **school cultures domesticate new technologies.** Rather than upending existing educational systems, new technologies get put to work serving particular niche in school or universities.

2023

technological changes have revolutionized our lives ... Schools, however, remain pretty much the same ... The processes in education have been incredibly resistant to significant change. . . **Education has not been revolutionized.**

# 4 REVOLUTION in EDUCATION

**#1: Organised Learning**

**#2: Institutionalised Education**

**#3: Masses Education**

**#4: Differentiated Education**

Personalisation

**“ The majority of the conversations are about how to integrate AI in traditional classrooms. But given the history of educational technology, it is unlikely that AI can do much in the traditional classroom that aims to teach students the same prescribed curriculum and pass traditional exams. For AI to realize its potential, we have to reimagine education.**

**LEADERSHIP**

**ROLES**

LEADERSHIP ROLES in CYCLE of CHANGE

**Digital Educational Leadership** refers to the practice of **guiding** and **managing** educational institutions through the integration of digital technologies and innovative practices. It involves leveraging technology to enhance teaching and learning, improve administrative processes, and **cultivating** a culture of continuous improvement and collaboration among educators, students, and stakeholders.
